

Topic 8: AI for Knowledge Management and Notes

8.1 Notion AI

- Notion AI adds AI capabilities inside your Notion workspace (add-on: \$10/user/month)
- AI Writing: draft, improve, change tone, or translate content directly on any Notion page
- AI Summaries: instantly summarise any page, meeting note, or project document
- AI Q&A: ask questions about your entire Notion workspace -- searches across all pages automatically
- AI in databases: auto-fill properties, summarise linked pages, extract action items from notes
- Best for: teams already using Notion for documentation and project management (notion.so)

8.2 Other AI Note-Taking Tools

- Obsidian + AI plugins: local-first markdown notes with AI via community plugins (Smart Connections, Copilot for Obsidian)
- NotebookLM (Google): best specifically for querying and synthesising uploaded research documents (notebooklm.google.com)
- Mem.ai: AI-powered note-taking that automatically surfaces relevant past notes as you work
- Logseq: open-source outliner with AI plugins; local-first and privacy-respecting
- Apple Intelligence (iOS 18+): AI writing tools, summarisation, and Smart Reply built into iOS Notes, Mail, and Messages

8.3 AI for Meeting Notes

- Otter.ai (otter.ai): real-time transcription, speaker identification, and action item extraction from meetings
- Fireflies.ai (fireflies.ai): records, transcribes, and analyses meetings; integrates with Zoom, Google Meet, and Teams
- Fathom (fathom.video): free AI meeting recorder for Zoom and Google Meet -- generates summary and action items instantly
- Microsoft Teams Copilot: built-in transcription and meeting summary (requires Microsoft 365 Copilot licence)
- Workflow: let AI capture everything -> review the summary -> share action items -> avoid manual note-taking

8.4 Building a Personal Knowledge System with AI

- Capture everything consistently: voice notes, meeting transcripts, article summaries -- AI can only work with what is saved

- Use AI for retrieval: semantic search finds relevant notes even when you don't remember exact wording
 - Combine tools: Notion AI for workspace knowledge, NotebookLM for research documents, Otter.ai for meetings
 - Weekly review: paste the week's notes and ask AI to identify key themes, decisions, and pending actions
 - Avoid information overload: AI-assisted capture is only useful if you also regularly review and act on what is saved
-
