

# Topic 11: AI for Project Management and Productivity

## 11.1 AI in Project Planning

- Generate a starting project plan: 'Create a project plan for launching a mobile app in 3 months with a team of 4'
- AI output typically includes: phases, tasks, dependencies, risk factors, and a rough timeline
- Always refine AI plans with domain knowledge -- AI does not know your team's skill gaps, budget, or constraints
- Tools workflow: ChatGPT / Claude for the plan -> export to Asana, Jira, Monday, or Notion
- Risk identification: 'What are the top 5 risks for this type of project and how should I mitigate each?'

## 11.2 AI-Enhanced PM Tools

- Asana AI: generate tasks from meeting notes, summarise project updates, and surface timeline risks
- Monday.com AI: automate repetitive workflows, summarise project status, generate task descriptions
- Linear: AI-generated issue descriptions, sprint summaries, and duplicate detection
- ClickUp AI: write task descriptions, generate meeting agendas, and summarise project activity
- Notion AI: generate project briefs, retrospective summaries, and status updates from raw notes

## 11.3 AI for Documentation

- After a meeting: paste the transcript (from Otter.ai or Fathom) and ask AI for decisions, action items, and open questions
- Documentation debt: paste messy, out-of-date notes and ask AI to restructure and clean them up
- Knowledge base articles: paste support tickets or Slack threads and ask AI to turn them into reusable help articles
- Runbooks and SOPs: 'Write an SOP for [process] including purpose, who does it, step-by-step procedure, and exceptions'

## 11.4 Personal Productivity

- Daily planning: 'I have these 8 tasks and 5 hours available. Help me prioritise and sequence them.'
- Eisenhower Matrix: paste your task list and ask AI to categorise by urgency and importance
- Weekly review: paste your notes and calendar summary, ask 'What did I achieve? What should I focus on next week?'

- Decision support: describe a decision you are facing; ask AI to list pros, cons, and alternative options you may not have considered
-
